Shure Model TCD-440A Cassette Deck

Popular Electronics

by Toyko Electric Co. (TEC) for J. Itoh following its specifications, and are available now.

The Starwriter Daisy-wheel printer provides 136 columns of pica type.

C. Itoh also has 5.25- and 8-in. double-sided double-density disk units. The maxi-flexi and mini-flexi line of disk drives are made by Toshiba and have a fairly good reputation as being reliable drives. The 8-in unit sells for \$725, which is about \$25 cheaper than a comparable Shugart drive. The 5.25-in drive is \$450, about the same as a Shugart drive.

In the July "Computer Bits," I mentioned Lobo's winchester package. Well, they have taken it just one step further with a Model 1850 dual fixed/floppy disk memory system. This unit puts the IMI 8-in. winchester drive in the same box as a 1.6M byte floppy. For the configuration of a 10M byte fixed disk drive, double-density floppy, chassis, and power supply, the price is a respectable \$4695. Although this may appear high, it's actually low by about \$1400 compared to similiar systems. The unit, as designed, is for the TRS-80 and Apple computers.

**Communications Items.** I'm a big proponent of electronic mail, and the benefits it brings to the computer user. I also keep an eye out for those items such as modems, that are a definite must to the use of these systems. One such modem is from Universal Data Systems and is called the 202

Universal 202 LP is a 1200-baud asynchronous communications modem.

LP. The unit is a certified FCC model, which allows for direct connection to the dial-up telephone network with-

CompuServe's information service.

A world of information available. Right now.

If you have a personal computer—or a computer terminal — CompuServe can bring a world of information into your home or small business.

**CompuServe**

CompuServe is a major computer services company that has been serving top industrial and governmental clients for more than a decade. Now we're also applying our extensive computing capacity to the delivery of information services to your personal computer.

**The Information Service**

This exciting service is available in more than 250 cities between 6 p.m. and 5 a.m. weekdays, all day weekends and most holidays. Cost? Only \$5.00 per hour billed in minutes. All you need is a 300 baud modem, and our complete information service is only a local phone call away.

Welcome to CompuServe's information service.

- **News, Weather, Sports.** Major regional newspapers. Plus international news services.
- **Finance. MicroQuote.** Updates and historical information on stocks, bonds and commodities.
- **Entertainment.** Theatre, book, movie and restaurant reviews. Plus opera, symphony, ballet, dance, museums, galleries...
- **Electronic Mail.** Create, edit, send and receive messages from any other CompuServe user ... nationwide.

- **Home & Educational Reference Service.** Anything you want to know ... from encyclopedia information to household tips.
- **CompuServe User Information.** In case you need technical help ... and information on new services as they become available.
- **MicroNET.** For the computer hobbyist. Software Exchange, line printer art gallery, challenging games, programming languages, word processing, business & educational programs ... and much, much more.

And this is just the beginning. CompuServe is continually adding to its list of available services. The world of electronic information isn't coming tomorrow. It's here today.

**CompuServe is Available at Radio Shack® Stores**

Your local Radio Shack® Store Sells CompuServe's information service. There are more than 6,000 Radio Shack® Stores and Dealers nationwide. Check with the outlet nearest you.

Radio Shack is a division of Tandy Corporation.

out a Data Access Arrangement (DAA). It is only 1.25-in. thick, fits under the telephone, and requires only two snap-in connections. The 202 LP provides 1200-baud half-duplex asynchronous communication for \$295.

Also supporting the use of micro-computers for communication and data acquisition is the Peripheral

Peripheral's Connection is a direct-coupled modem for TRS-80.

people, located in Mercer Island, WA. This small company has developed a \$249 modem, called the Connection®, that turns a 4K Level I TRS-80 into an intelligent remote terminal. This 300-baud model connects to the TRS-80 via the screen printer port and directly to the telephone lines via an FCC type-approved connector.

A very striking and important feature of the Connection is that it is provided with full software support to permit autodialing and data transfer. Also, the folks at Mercer Island have made available (for free) software that can be used to make the Connection, or for that matter any modem, work with general-purpose micros. An example of this software, is shown in Listings 1 and 2.

Listing 1 is a BASIC program for use on a TRS-80, with the Connection. This is ready to run—just type it in and go! Should you have a need to modify it, specifically the user routines in lines 10000-10006, Listing 2 is a complete Z-80 source listing of those data items.

As an added benefit and helpful tool (incidentally you can use this whether or not you engage in telecommunications) is Listing 3. This FIXIT program allows you to add or delete line numbers from a text file. You will find this function important for editing purposes since you can then reference a specific line number for changes. Then, after the text is updated, remove the numbers before submitting the source to an assembler

or a text formatter. All of these programs can be obtained on-line with MicroNet by typing in: DIR [70210,205] FIXIT.BAS. The program as shown in Listing 3 will be displayed on your terminal.

Along with the software and modem offering, the Peripheral People have made available, through MicroNet, an on-line HAM system. To use this system, enter: IRUN [70210,205] HAMGAB.SHR. You will now be able to operate in much the same manner as you would on 20-meter RTTY.

If you have been considering subscribing to MicroNet, but think it might be too difficult to use, you will be glad to know that the service has been simplified. Now users are greeted with a selection menu which allows for a choice of functions, such as news, weather, sports, financial, and MicroNet.

The menu system allows you to

quickly obtain up-to-date information on the various categories. The MicroNet service will, however, function pretty much the same; but some exciting enhancements are planned for it also, and should be in place by the end of this year.

If you are using the MicroNet service now and have been wondering how to get the most out of it, say for word processing, here is a suggestion that may work. First, assume that you have developed a text or data file off-line and, for whatever reason, now want to transfer it to a file in your MicroNet working area. Using a communication package such as MCS from Heath users group, you will call and sign into MicroNet. Be sure to set the correct lower-case option (in my case for an H-89 I, type TER LCT off, which permits entering of upper and lower case characters). Next, set up a file using the File command of: FIL (file name. ext); then return to

CONNECTION LISTING 2—Z-80 SOURCES

# Announcing . . . The Phone Ranger

The cordless phone that works like a regular phone up to 300 feet from your house. Use it in your own back yard with our compliments. Keep it, if you wish, for ONLY \$119.95!

I live on five acres. And I keep four horses in my back yard. Used to be, if I got a call while I was down at the corral, one of the kids would yell out the kitchen window and I'd do the hundred-yard dash to the nearest house phone.

No more. With The Phone Ranger I can groom Laird, my Palomino gelding, with one hand and call my broker with the other.

Take or make calls up to 300 feet away.

Maybe you don't keep horses. But if you've got a pool, patio, garden, workshop, tennis court or garage—and you'd like the phone to come to you instead of you going to it—this is the answer.

Try The Phone Ranger for 15 days. Send it back if you want. If you decide to keep it, the best news is the price!

Units that look like toys sell for up to \$495.00!

There's a unit called "ROVAPRO" that looks like my son's toy walkie-talkie—not like a real phone at all—and it goes for a cool \$495.00.

Then there's "MURAPHONE." It's \$149.95. But it's even more like a toy walkie-talkie. You have to push a button to talk and release to listen—with all that "Roger, over to you" stuff in between. Not like a real phone at all.

The Phone Ranger looks like a real phone, rings like a real phone, dials out like a real phone . . . has a range of 300 feet . . . and it's only \$119.95 plus \$5.95 shipping and handling. If you'd prefer a range of a full 750 feet, order the deluxe version for only \$189.95 plus \$5.95 shipping and handling.

Doubles as an extra extension phone.

When you're not using it outside, use it as an extra extension phone without paying monthly charges to the phone company.

Works so simply.

Plug base unit into phone jack and into AC house current. Then plug The Phone Ranger into base unit to charge battery. Now unplug The Phone Ranger and you're ready to use it to take or make calls up to 300 feet away (750 feet if you choose the

deluxe version). Red indicator light tells you when it's time to recharge.

If you don't have a phone jack, the phone company will install one for a nominal one-time charge. If you have an old-fashioned, 4-prong jack, The Phone Ranger comes with an adaptor you can use. Even if you live in an area with rotary dialing, the pushbutton system on your Phone Ranger will work. And the entire unit is FCC approved.

Includes amazing "last number" memory!

No need to re-dial when you get a busy

signal. Just press the # or the \* button and The Phone Ranger automatically redials the last number you called!

(A great security idea: "program" your phone to your local police number before you go to bed. The touch of a single button alerts police in case of emergency.)

Pick up your regular phone right now. Here's the number to call . . .

**CALL TOLL-FREE  
800-621-5839**

(In Illinois, call 800-972-5858)

For faster service, give this number 15-9500 as soon as the operator answers. Lines are open 24 hours, 7 days a week.

If you're using your credit card, use our toll-free number. If you prefer, send your check to Roy Thomas & Associates, Inc. at the address below. (Illinois residents add 6% sales tax.)

You must be completely satisfied with The Phone Ranger. If for any reason you're not, return it within 15 days for a full refund, no questions asked. Use the carton it comes in to return it.

I know you'll have fun with it. Order now.

**Roy Thomas  
& ASSOCIATES, INC.**  
733 Lee Street, Dept. 15-9500  
Des Plaines, IL 60016

# Catch the fastest C-meter under \$200 the autoranging B&K-PRECISION 830

Model 830 \$199  
Model 820 \$155 (not shown)

B&K-PRECISION was the first company to offer a lab-quality capacitance meter for under \$150, now we're first with autoranging for under \$200. The new 830 is fast, accurate and built with famous B&K-PRECISION dependability.

The 830 offers features that are tough to match at any price, such as 0.1 pF resolution, large 3½-digit LCD display and fuse protection against charged capacitors. Basic accuracy is 0.2%, much greater than the tolerance of most capacitors. Measurement range extends to 199.9 mF.

Simplicity of operation is another strong suit for the 830. For checks limited to a narrow value range, the "range hold" capability can lock the 830 onto one range—an added time saver. This feature, along with its fast reading time, makes the 830 especially valuable for incoming inspection applications.

For applications suited to manual ranging, B&K-PRECISION offers the LED readout 820 at an even lower cost.

With either B&K-PRECISION C-meter you can, measure unmarked capacitors... verify capacitor tolerance... measure cable or switch capacitance... match capacitors for critical applications... measure complex capacitor networks... set trimmer capacitors.

For more information, contact your local distributor and see why B&K-PRECISION is now the leading supplier of digital capacitance meters.

```

your communication package (for MCS type a control B); then send the file to MicroNet.

You must be sure to return back to MicroNet control and issue an "EX" to save the file. Now the file is available for manipulation in the MicroNet system. As an example of this, this month's column was written and edited off-line, then transferred to MicroNet for formatting via its text processor RUNF10. The processed file, which now has a .DOC extension, was then downloaded to my system and played out on hardcopy. If your concern is over cost, this whole process cost me (and this includes the \$2/hr tymnet charge) about \$3.00. The key here was that most of the work was prepared off-line using the functions of my computer.

If you just want to have some fun with MicroNet, they have implemented a user talk system that is patterned after Citizens Band Radio. You can now monitor pseudo CB channels 1-40 and break in and have a chit-chat. The MicroNet people have also built in a scrambler so you and a

friend can carry on private conversations via your computer.

**Information and Fun Books.** It's always a good idea to have information resources in your library, and two books that are important to have, are: Radio Shack's *The Engineer's Notebook*, and *Electronics Designer's Casebook No. 3*. The first is written by PE's own Forrest Mims and is a collection of circuits from amplifiers to LED oscilloscopes. This book is available from any Radio Shack store for only \$1.99. *The Designer's Casebook*, is a collection of design projects from *Electronics* magazine from Feb. 16, 1978 to January 4, 1979. This book covers circuits from audio to signal sources and is available from McGraw-Hill for \$5.

Just for fun, Radio Shack has made available, free, a comic book about how a TRS-80 helps Superman save Metropolis. Although the story is a little improbable, so is Superman. It's fun reading and for comic book fans makes an important addition to that priceless collection. ♦

# The first personal computer for under \$200.

The Sinclair ZX80.  
A complete computer—  
only \$199.95 plus \$5.00 shipping.

Now, for just \$199.95, you can get a complete, powerful, full-function computer, matching or surpassing other personal computers costing several times more.

It's the Sinclair ZX80, the computer that independent tests prove is faster than all previous personal computers. The computer that "Personal Computer World" gave 5 stars for 'excellent value.'

The ZX80 cuts away computer jargon and mystique. It takes you straight into BASIC, the most common, easy-to-use computer language.

You simply take it out of the box, connect it to your TV, and turn it on. And if you want, you can use an ordinary cassette recorder to store programs. With the manual in your hand, you'll be running programs in an hour. Within a week, you'll be writing complex programs with confidence.

All for under \$200.

**Sophisticated design makes the ZX80 easy to learn, easy to use.**

We've packed the conventional computer onto fewer, more powerful LSI chips—including the Z80A microprocessor, the faster version of the famous Z80. This makes the ZX80 the world's first truly portable computer (6½" x 8½" x 1½" and a mere 12 oz.). The ZX80 also features a touch sensitive, wipe-clean keyboard and a 32-character by 24-line display.

Yet, with all this power, the ZX80 is easy to use, even for beginners.

### Your course in computing.

The ZX80 comes complete with its own 128-page guide to computing. The manual is perfect for both novice and expert. For every chapter of theory, there's a chapter of practice. So you learn by doing—not just by reading. It makes learning easy, exciting and enjoyable.

### The ZX80's advanced design features.

Sinclair's 4K integer BASIC has performance features you'd expect only on much larger and more expensive computers. These include:

- Unique 'one touch' entry. Key words (RUN, PRINT, LIST, etc.) have their own single-key entry and are stored as a single character to reduce typing and save memory space.
- Automatic error detection. A cursor identifies errors immediately to prevent

entering programs with faults.

- Powerful text editing facilities.
- Also programmable in machine code.
- Excellent string handling capability—up to 26 string variables of any length.
- Graphics, with 22 standard symbols.
- Built-in random number generator for games and simulations.

Sinclair's BASIC places no arbitrary restrictions on you—with many other flexible features, such as variable names of any length.

And the computer that can do so much for you now will do even more in the future. Options will include expansion of 1K user memory to 16K, a plug-in 8K floating-point BASIC chip, applications software, and other peripherals.

### Order your ZX80 now!

The ZX80 is available only by mail from Sinclair, a leading manufacturer of consumer electronics worldwide. We've already sold tens of thousands of units in Europe, so demand will be great.

To order by mail, use the coupon below. But for fastest delivery, order by phone and charge to your Master Charge or VISA. The ZX80 is backed by a 30-day money-back guarantee, a 90-day limited warranty with a national service-by-mail facility, and extended service contracts are available for a minimal charge.

P.O. Box 3027, Wallingford, CT 06492.

To: Sinclair Research Ltd., 475 Main St., P.O. Box 3027, Wallingford, CT 06492.

Please send me \_\_\_\_\_ ZX80 personal computer(s) at \$199.95\* each (US dollars), plus \$5 shipping. (Your ZX80 may be tax deductible.)

I enclose a check/money order payable to Sinclair Research Ltd. for \$ \_\_\_\_\_.

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_

Occupation: \_\_\_\_\_ Age: \_\_\_\_\_

Intended use of ZX80: \_\_\_\_\_

Have you ever used a computer?  Yes  No.

Do you own another personal computer?  Yes  No. \*For Conn. deliveries, add 7% sales tax.

Price includes TV and cassette connectors, AC adaptor, and 128-page manual.

All you need to use your ZX80 is a standard TV (color or black and white). The ZX80 comes complete with connectors that easily hook up to the antenna terminals of your TV. Also included is a connector for a portable cassette recorder, if you choose to store programs. (You use an ordinary blank cassette.)

The ZX80 is a family learning aid. Children 10 and above will quickly understand the principles of computing—and have fun learning.

**Phone orders:** (203) 265-9171. Mon.-Fri. 8 AM-6 PM EST. We'll deduct the cost of the call from your invoice. (For technical information, call (617) 367-2555, Mon.-Fri. 9 AM-5 PM EST.)
